Professional Summary

A results-driven Backend Developer with hands-on experience in designing scalable microservices, high-performance REST APIs, and database optimization. Skilled in Python, Django, Flask, and MySQL, with strong expertise in AI/ML integration like facial recognition, NLP, and LangChain agents. Proven success in reducing API latency by up to 70% and scaling systems for over 10,000 records. Adept at cloud environments (AWS, Docker, CI/CD pipelines) and passionate about system design, performance optimization, and clean architecture.

Technical Skills

- Languages: Python (Advanced), SQL, JavaScript
- Frameworks: Django (DRF, ORM), Flask (REST APIs), FastAPI (Basics)
- Databases: MySQL (Query Optimization, Indexing), PostgreSQL, MongoDB, SQLite
- Cloud & DevOps: Docker, AWS (EC2, S3, RDS), GitHub Actions (CI/CD)
- AI/ML Tools: OpenCV, face_recognition, LangChain, speech_recognition, pyttsx3
- Concepts: OOP, Data Structures & Algorithms, System Design, API Security (JWT/OAuth), WebSockets, Caching
- Tools: Git, Postman, VS Code, PyTest, SQLite Browser

Work Experience

Backend Developer Intern – Elevate Labs | Aug 2025 – Sep 2025 Built and optimized backend features using Python (Django) and MySQL. Designed and deployed REST APIs serving 500+ RPM with latency <200ms. Implemented database optimizations, improving query performance by 30%. Collaborated with senior developers on scalable, secure microservices.

Python Backend Developer – Freelance Projects | Jun 2025 – Jul 2025 Architected backend logic for production-ready apps. Developed **Mobi – AI Virtual Assistant**, processing 10+ voice commands with 92% accuracy, saving 15+ hours/month. Created **Face Recognition Attendance System**, achieving 98.5% accuracy for 50+ users, reducing attendance time from 5 min to 30 sec. Reduced API latency by 70% in a Weather Detection App with caching and optimized calls. Ensured Git version control, PyTest unit testing, and modular OOP design.

Key Projects

Mobi – AI Virtual Assistant

An NLP-powered assistant using LangChain for knowledge reasoning and voice interaction. Improved response relevance by 35%.

GitHub: github.com/maurya223/mobi-assistant

Face Recognition Attendance System

Automated attendance with OpenCV, face_recognition & MySQL. Cut processing from 5 min to 30 sec, scaled for 10,000+ records.

GitHub: github.com/maurya223/face-attendance

Dental Clinic Website

Full-stack web app with Django, HTML, CSS, JS & MySQL. Implemented ORM for secure CRUD and data persistence.

Education

B.Tech – Computer Science & Engineering | 2022 – 2026

Guru Gobind Singh Indraprastha University, New Delhi

Relevant Coursework: Data Structures, Algorithms, DBMS, Software Engineering, AI/ML

Certifications

Python Programming (TestDome): Top 5% in OOP, Algorithms & Debugging.

SQL Fundamentals (TestDome): Optimized 20+ queries to run in under 100ms.

Languages

English – Professional Proficiency

Hindi – Native
